PROFILE

Java Backend Engineer with 3 years of hands-on experience designing and shipping microservices, REST APIs and integration systems. Skilled in Java, Spring Boot, Hibernate, MySQL, AWS, RabbitMQ and Docker, with a track record of delivering production systems serving 10+ enterprise clients, resolving 15+ critical production incidents and reducing manual debugging effort by 30% through AI-driven automation.

EXPERIENCE

AlignBits LLC — Software Engineer (promoted from Jr. SE)

Justransform iPaaS Platform · Remote · Dubai, UAE

Sep 2024 – Present

- **Core backend contributor across 5+ enterprise integration microservices** — drove legacy modernization, feature delivery and platform stability for 10+ client pipelines in production.
- **Built Spring Boot microservices integrated with AWS SQS** to handle async transactions across client pipelines, with reliable message processing under heavy load.
- **Developed an AI-driven automation pipeline using the OpenAI API** to validate and auto-correct transformation scripts, which cut manual debugging effort by around 30%.
- **Worked on the orchestration engine** covering transformation, validation, routing, split/merge and multicast workflows; resolved 15+ high-impact production incidents along the way.
- **Added JWT and OAuth 2.0 authentication** to REST endpoints using Spring Security; shipped features through CI/CD pipelines on Git, Docker and Agile sprints.

IHX Private Limited — Associate Software Engineer

Bengaluru, India · Healthcare Claims Processing

Jun 2023 – Aug 2024

- **Developed healthcare backend services** using Java, Spring Boot, MySQL and MongoDB; built transformation engines that convert complex healthcare JSON into structured, validated objects.
- **Tuned Hibernate ORM queries and MySQL indexes** on high-frequency lookup endpoints, which improved query performance and cut invalid claim submissions.
- **Built multi-layer validation pipelines** with a custom exception-handling framework and Spring Data JPA to strengthen platform reliability on high-volume production traffic.

PROJECT

PayFlow — Digital Wallet and Payment System

Java 17 · Spring Boot · JWT · Hibernate · MySQL · RabbitMQ · Docker

github.com/Shubh2-0/PayFlow

- **Designed a microservices-based digital wallet** with 3 services (auth, wallet, notification), each owning its MySQL database and Swagger API documentation.
- **Implemented pessimistic locking for concurrent balance updates**, idempotent transactions via unique keys to prevent duplicate payments and deadlock prevention through ordered wallet locking.
- **Built an event-driven notification pipeline using RabbitMQ** for async transaction events; wrote JUnit 5 and Mockito tests (@WebMvcTest, @DataJpaTest); containerized with Docker Compose for one-command local setup.

TECHNICAL SKILLS

Languages: Java (SE 8, 11, 17), SQL, JavaScript, Python, Bash

Frameworks: Spring Boot, Spring Security, Spring Data JPA, Spring MVC, Hibernate ORM, JUnit 5, Mockito, Maven

Backend and APIs: RESTful APIs, Microservices Architecture, Object-Oriented Programming, Design Patterns, Multithreading, Exception Handling, Swagger / OpenAPI

Databases: MySQL, PostgreSQL, MongoDB, Redis

Cloud and DevOps: AWS (SQS, EC2, S3), Docker, Docker Compose, Git, GitHub Actions, CI/CD, Postman, IntelliJ IDEA

Messaging and Security: RabbitMQ, AWS SQS, JWT Authentication, OAuth 2.0, BCrypt, Role-Based Access Control (RBAC)

Methodologies: Agile, Scrum, TDD, SDLC, Code Reviews, Pair Programming

EDUCATION

Masai School, Bengaluru — Software Engineering Program (Java Backend Specialization)

2022 – 2023

Devi Ahilya Vishwavidyalaya, Indore — Bachelor of Commerce (B.Com)

2019 – 2022
