PROFESSIONAL SUMMARY

Backend Software Engineer with 3 years of hands-on experience designing and scaling microservices, event-driven architectures and RESTful APIs. Specialized in Java, Spring Boot and AWS, with a proven track record of modernizing legacy systems and delivering robust backend infrastructures for enterprise iPaaS and healthcare domains. Adept at query optimization, resolving critical production bottlenecks and building AI-powered automation to reduce engineering overhead.

EXPERIENCE

AlignBits LLC

Sep 2024 - Present

Software Engineer (Promoted from Jr. Software Engineer)

Dubai, UAE (Remote)

- Engineered scalable backend microservices for the Justransform Enterprise B2B Integration Platform (iPaaS), powering seamless REST, SFTP and AS2 pipelines for 10+ enterprise clients.
- Designed high-throughput asynchronous workflows using AWS SQS and Spring Boot, ensuring reliable message processing and zero data loss under heavy concurrent loads.
- Architected an LLM-powered validation pipeline via OpenAI API to automate data transformation script correction, reducing manual debugging effort by 30%.
- Led Root Cause Analysis (RCA) and resolution for 15+ critical production incidents across routing, splitting and orchestration engines, significantly improving platform stability.
- Modernized legacy infrastructure by migrating microservices from Java 11 to Java 17, and implemented OAuth 2.0 / JWT for secure API communication.

IHX Private Limited

Jun 2023 - Aug 2024

Associate Software Engineer

Bengaluru, India

- Built robust backend transformation engines for a Healthcare Claims Processing System to parse high-volume JSON payloads into validated objects for downstream processing.
- Optimized database layer by resolving N+1 query issues and implementing composite indexes in MySQL, which slashed API latency on high-frequency lookup endpoints and prevented invalid claim submissions.
- Developed multi-layered validation pipelines utilizing Spring Data JPA and a custom exception-handling framework to guarantee data integrity across millions of transactional records.

PROJECTS

PayFlow - Distributed Digital Wallet & Payment System

Source Code

- Tech Stack:** Java 17, Spring Boot, Hibernate, MySQL, RabbitMQ, Docker
- Designed a distributed wallet system handling scalable, concurrent transactions across 3 independent microservices (Auth, Wallet, Notification), utilizing an Event-Driven Architecture via RabbitMQ.
- Prevented race conditions, double-spending and DB deadlocks via pessimistic/ordered locking and idempotent transactions; containerized with Docker Compose.

SKILLS

Core: Java 17, Java 11, Java 8, Spring Boot, Spring Security, Spring Data JPA, Microservices.

Databases & ORM: MySQL, PostgreSQL, MongoDB, Redis, Hibernate ORM, Query Optimization, Database Indexing.

Cloud & DevOps: AWS, SQS, EC2, S3, Docker, Docker Compose, CI/CD, GitHub Actions.

API, Auth & Messaging: RESTful APIs, System Design, JWT, OAuth 2.0, RabbitMQ, OpenAPI, Swagger.

Testing & Tools: JUnit, Mockito, Maven, Postman.

EDUCATION

Masai School

2022 - 2023

Software Engineering Program (Java Backend Specialization)

Bengaluru, India

Devi Ahilya Vishwavidyalaya

2019 - 2022

Bachelor of Commerce (B.Com)

Indore, India
