Professional Summary

Java backend engineer and software developer with 3+ years of experience building high-throughput backend services and Java Spring Boot microservices across fintech, enterprise SaaS and healthcare. Architected 3 production microservices alongside an existing payment monolith, engineered zero-downtime balance migrations across 3 wallet types (General, Food and NCMC) with automated ledger reconciliation and cut payment API latency by 35% by fixing Kafka consumer lag. Experienced in Java, Spring Boot, Kafka, Redis, SQL databases and distributed event-driven systems.

Work Experience

MobilePe Fintech Private Limited Jun 2026 - Present
Java Spring Boot Developer / Backend Engineer *Noida, Uttar Pradesh, India*

- Architected and delivered 3 core microservices (`onboarding-service`, `payment-service` and `notification-service`) alongside the legacy monolith, implementing backward-compatible endpoints for a phased migration.
- Cut payment API latency by 35% by offloading synchronous database writes from the Kafka listener thread, tuning consumer concurrency and adding Redis Bloom filters to block cache penetration.
- Led automated migration of user accounts and multi-wallet balances (General, Food and NCMC) into the new microservices architecture, executing chunked batch writes and checksum audits with zero balance desync.
- Engineered UPI payment and digital wallet workflows with Mobileware and M2P, implementing idempotency keys, database row locking and a double-entry ledger with hold-then-settle transaction recovery.
- Built automated KYC verification pipelines (Aadhaar, PAN and Syntizen video KYC webhooks) with encrypted data storage and secure indexing to maintain fast lookups without exposing sensitive user information.
- Configured dead-letter queue (DLQ) retry handlers on Kafka consumers and hardened webhook security to protect notification payloads against unauthorized access and message loss.

AlignBits LLC Sep 2024 - May 2026
Software Engineer (Promoted from Jr. Software Engineer) *Dubai, UAE (Remote)*

- Reduced manual script debugging time by 30% by connecting OpenAI models to automatically detect and correct transformation syntax errors across high-volume client data pipelines.
- Designed an asynchronous orchestration engine using RabbitMQ for message routing, payload transformations and split/merge workflows across enterprise logistics pipelines.
- Implemented stateless JWT and OAuth 2.0 authentication protocols across 5 distributed microservices to enforce role-based API access security.
- Standardized Docker containers and automated GitHub Actions CI/CD deployment pipelines, shortening production release turnaround times.

IHX Private Limited Jun 2023 - Aug 2024
Associate Software Engineer (Java Backend) *Bengaluru, India*

- Accelerated core API response times by 40% across endpoints by eliminating N+1 Hibernate query loops, creating composite MySQL indexes and deploying Redis caching.
- Developed high-volume backend data transformation engines in Java 11 and MongoDB to process daily healthcare insurance claims.
- Constructed validation pipelines with Spring Data JPA and centralized exception handling, maintaining strict clinical data integrity across claims.

Technical Skills

Languages & Core: Java (8/11/17/21), JavaScript, Object-Oriented Programming (OOP), SOLID Principles, Design Patterns, Data Structures and Algorithms, Concurrency
Frameworks & Architecture: Spring Boot 3.x, Spring Security, Spring MVC, Spring Data JPA, Microservices Architecture, API Gateway, Event-Driven Architecture, Distributed Systems, JUnit, Mockito
Databases & Caching: PostgreSQL, MySQL, Redis, MongoDB, Hibernate ORM (Object-Relational Mapping), Bloom Filters, Deadlock Prevention, Query Optimization, Flyway
APIs & Messaging: RESTful APIs, Apache Kafka, Mobileware UPI PPI, M2P Integration, RabbitMQ, Idempotency, Retry/DLQ Handling, JWT, OAuth 2.0, OpenAPI (Swagger)
DevOps & Cloud: AWS (EC2, S3, RDS), Docker, Docker Compose, Git, CI/CD, GitHub Actions, Maven, OpenTelemetry, Distributed Tracing
Methodologies & AI: Agile/Scrum, Production Troubleshooting, System Architecture, OpenAI API, Gemini API

Education

Masai School 2022 - 2023
Software Engineering Program (Java Backend Specialization) *Bengaluru, India*

Devi Ahilya Vishwavidyalaya 2019 - 2022
Bachelor of Commerce (B.Com) *Indore, India*
