PROFILE

Backend Engineer (Java) with 2+ years of experience building enterprise-grade microservices, distributed integration systems, and AI-powered automation solutions. Proven expertise in Spring Boot, REST APIs, AWS SQS, RabbitMQ, OAuth 2.0, JWT, and FHIR standards for high-volume production systems across healthcare and logistics domains.

EXPERIENCE

AlignBits LLC — Junior Software Engineer

Aug 2024 – Present

Justransform iPaaS Platform · Remote · Dubai, UAE

- Core backend contributor across 5+ enterprise integration microservices — drove legacy modernization, feature delivery, and platform stability for 10+ client pipelines.
- Built distributed Spring Boot microservices with AWS SQS for high-throughput transactions across enterprise client pipelines in production.
- Developed AI-driven automation pipeline (OpenAI API) to validate and auto-correct EDI/JSON transformation scripts — reduced manual debugging by 30%.
- Designed orchestration engine supporting transformation, validation, routing, split/merge, and multicast workflows; resolved 15+ high-impact production incidents.
- Delivered production-ready features using CI/CD pipelines with Git and Docker in Agile environments.

IHX Private Limited — Associate Software Engineer

Sep 2023 – Jun 2024

Bengaluru, India · Healthcare Claims Processing

- Developed scalable healthcare backend using Java, Spring Boot, MySQL, and MongoDB; implemented transformation engines converting complex healthcare JSON into FHIR-compliant objects.
- Optimized Hibernate ORM queries and MySQL indexes on high-frequency lookup endpoints, improving query performance and reducing invalid claim submissions.
- Built multi-layer validation pipelines with custom exception-handling frameworks, strengthening platform reliability across high-volume production systems.

PROJECTS

Shopzilla — E-Commerce Platform | Java, Spring Boot, MySQL, Maven, Lombok

github.com/Shubh2-0/Shopzilla

- Built a Java + Swing desktop e-commerce platform with 3-role system (Admin/Buyer/Seller), JDBC-MySQL integration, transaction management, wallet system, and inventory tracking.
- Implemented role-based access control, product lifecycle management, refund workflows, and real-time stock monitoring using Core Java and OOP design patterns.

SKILLS

Languages: Java (SE 11/17), JavaScript, Python, SQL, Bash

Frameworks: Spring Boot, Spring Security, Spring Data JPA, Hibernate, JUnit 5, Vaadin

Backend & Cloud: REST APIs, Microservices, AWS SQS, RabbitMQ, Redis, EDI, OAuth 2.0, JWT, FHIR, Swagger

Databases: MySQL, PostgreSQL, MongoDB, Redis

AI & Automation: OpenAI API, Gemini, Prompt Engineering, AI-driven Workflow Automation

DevOps & Tools: Docker, Git, CI/CD, Maven, Postman, IntelliJ IDEA

EDUCATION

Masai School, Bengaluru

2022 – 2023

Full Stack Web Development — Backend Engineering

Devi Ahilya Vishwavidyalaya, Indore

2019 – 2022

Bachelor of Commerce (B.Com)
