PROFILE

Software Engineer (Java) with **2+ years** of experience building enterprise-grade microservices, distributed integration systems, and AI-powered automation solutions. Skilled in Java, Spring Boot, REST APIs, AWS, Hibernate, and AI integration with a track record of shipping production systems serving **10+ enterprise clients**, resolving **15+ critical production incidents**, and reducing manual debugging effort by **30%** through AI automation.

EXPERIENCE

AlignBits LLC — Software Engineer

Aug 2024 – Present

Justtransform iPaaS Platform · Remote · Dubai, UAE

- Core backend contributor across 5+ enterprise integration microservices — drove legacy modernization, feature delivery, and platform stability for **10+ client pipelines** in production.
- Built distributed Spring Boot microservices with AWS SQS for high-throughput async transactions across enterprise client pipelines, ensuring reliable message processing at scale.
- Developed AI-driven automation pipeline (OpenAI API) to validate and auto-correct transformation scripts — **reduced manual debugging by 30%** and accelerated delivery cycles.
- Designed orchestration engine supporting transformation, validation, routing, split/merge, and multicast workflows; **resolved 15+ high-impact production incidents**.
- Implemented secure API endpoints using Spring Security, OAuth 2.0, and JWT; delivered production-ready features using CI/CD pipelines with Git and Docker in Agile sprints.

IHX Private Limited — Associate Software Engineer

Sep 2023 – Jun 2024

Bengaluru, India · Healthcare Claims Processing

- Developed scalable healthcare backend using Java, Spring Boot, MySQL, and MongoDB; built transformation engines converting complex healthcare JSON into structured, validated objects.
- Optimized Hibernate ORM queries and MySQL indexes on high-frequency lookup endpoints — improved query performance and reduced invalid claim submissions.
- Built multi-layer validation pipelines with custom exception-handling frameworks and Spring Data JPA, strengthening platform reliability across high-volume production systems.

PROJECT

Maa Kaali Creations — Production E-Commerce Platform

maakaal creations.in →

AI-Powered Development (Claude Code, Gemini) · Razorpay · Cloudinary · REST APIs · Cloud Deployment

- Conceptualized, architected, and shipped a **live production e-commerce platform** — leveraging AI-powered development tools (Claude Code, Gemini) to design, build, and deploy the entire system end-to-end.
- Managed complete product lifecycle: Razorpay payment integration, image hosting (500+ products), automated email marketing with abandoned cart recovery, Instagram and Pinterest social media automation.
- Leveraged AI-first engineering approach: prompt engineering, AI-assisted architecture decisions, automated code generation, and debugging — shipped the entire production system **10x faster** using modern AI workflows.

TECHNICAL SKILLS

Languages:	Java (SE 11/17), JavaScript, Python, SQL, Bash
Frameworks:	Spring Boot, Spring Security, Spring Data JPA, Hibernate, JUnit 5, Vaadin
Backend & Cloud:	REST APIs, Microservices, AWS (SQS), RabbitMQ, Redis, OAuth 2.0, JWT, Swagger/OpenAPI
Databases:	MySQL, PostgreSQL, MongoDB
AI & Tools:	OpenAI API, Gemini, Claude Code, Prompt Engineering, AI-driven Workflow Automation
DevOps:	Docker, Git, CI/CD, Maven, AWS, Koyeb, Vercel, Postman, IntelliJ IDEA

EDUCATION

Masai School, Bengaluru

2022 – 2023

Full Stack Web Development — Backend Engineering (Java)

Devi Ahilya Vishwavidyalaya, Indore

2019 – 2022

Bachelor of Commerce (B.Com)
